About

Haneul Yoo is a Ph.D. student advised by Alice Oh in the School of Computing at KAIST. Her research interest primarily lies in the intersection of natural language processing and computational social science. In particular, she mainly works on (1) understanding historical documents in low-resource languages and (2) applying and utilizing NLP in language education. She believes there are still myriads of underrepresented languages in NLP, and our efforts on low-resource languages can build more culturally-diverse language models. She also believes language learners can contribute to NLP techniques and data and vice versa.
