About

Haneul Yoo is a Ph.D. student advised by Alice Oh in the School of Computing at KAIST. Her research interest primarily lies in the field of natural language processing and machine learning. In particular, she is dedicated to (1) data-centric and multilingual NLP and (2) LLM-driven education innovation. She believes there are still myriads of underrepresented languages in NLP, and our efforts on low-resource languages can build more culturally-diverse language models. She also believes recent advances in AI can assist language learners, and researchers can leverage them to enhance NLP data and techniques as well.
